1.   Glossary

The following table explains the most important definitions and principles. The definitions do not necessarily reflect the professional circumstances within a canton but are used to illustrate the technical logic from an application point of view. For general definitions see the eCH-0155 and eCH-0045 Standards which define the data, format and allowed values of characteristics in the context of political rights at all federal levels in Switzerland.

Term	Definition
Domain of influence type	A domain of influence takes place on one domain of influence type at a time. The following domain of influence types exist according to eCH-0155: • CH (Federal) • CT (Canton) • BZ (District) • MU (Municipality) • SK (City District) • SC (School Community) • KI (Parish) • OG (Local Citizens' Assembly) • KO (Corporation) • AN (Other)
EK / Loganto	EK/Loganto is the existing residential solution in the canton of St.Gallen. This represents the basis for the resident data used in VOTING Stimmregister.
DME	DME is the project name of the canton of St.Gallen for the introduction of a new resident solution - the replacement of the existing EK/Loganto solution.
COBRA	Is the system for managing the Swiss abroad in the canton of St.Gallen.
Filter	Filters make it possible to restrict the large amount of personal data according to defined attributes. Filters are therefore the basis for further use in VOTING voting documents (e.g. "All eligible voters" & "E-Voting Flag" for all eligible e-voters).
Filter version	Filters are divided into a current (live) view and various versions. A filter version always contains a key date based on which the filter criteria are calculated (e.g. the age of 18 is reached on the key date).
